#### SPECIFICATION OF THE INVENTION

### **CLEAN PROCESS OF PROCESSES FOR MANUFACTURING NON CARCINOGENOUS ZERO POLLUTING ECO FUELS FROM GAS HYDRATES, NOT EXHAUSTING EVEN CO<sub>2</sub> TO FACE THE CANCER AND THE MENACING GREEN HOUSE EFFECT**

#### **ABSTRACT**

This invention is for a PROCESS OF PROCESSES for manufacturing a plurality of novel ecological fuels designed for transportation vehicles, industrial and heating purposes. The GOAL of the invention is total solution of the air pollution problem meaning full elimination of the SMOKE, the CARCINOGENS and the GREEN HOUSE GASES.

The solution counts on complete elimination from the fuels of all cyclic hydrocarbons and the present antiknocks by introducing new clean fuels some of which are also antiknocks. They are best produced from GAS HYDRATES and from the specially invented FUEL ALLOYS, as well as from other materials. To make them economically feasible the designed Process of Processes rely entirely on the BEZENTROPIC TECHNOLOGY of this invention. Only that way they can become inexpensive since the process consumes a lot of electricity which can be produced enough inexpensively only by the BEZENTROPIC POWER PLANTS of the invention.
